

PRESS RELEASE - FOR IMMEDIATE RELEASE

Elestio Adds T Cloud from Deutsche Telekom as a Cloud Provider for 400+ Fully Managed Open Source Services

T Cloud customers can now deploy Elestio's 400+ fully managed open source services directly onto their own T Cloud infrastructure, with native marketplace integration coming next.

Partner: T Cloud | ELS-PR-2026-001 | September 14, 2026

DUBLIN, Ireland - September 14, 2026 - Elestio, the platform for fully managed open source software, today added T Cloud from Deutsche Telekom as a supported cloud provider. T Cloud customers can now run any of Elestio's 400+ managed open source services on the infrastructure they already trust, keeping full control of their data, their cloud, and their procurement relationship with Deutsche Telekom.

KEY TAKEAWAYS

- Any of Elestio's 400+ managed open source services can now run on a customer's own T Cloud infrastructure.
- No workload migration and no vendor lock-in: the software runs where the customer chooses, and stays theirs.
- Native provisioning from the T Cloud Public Marketplace is the next phase of the partnership.

Available now: managed open source on your own T Cloud infrastructure

Using Elestio's bring-your-own-cloud model, existing T Cloud customers can spin up any of Elestio's 400+ open source services and deploy them inside their own T Cloud environment. The services run on the customer's infrastructure while Elestio handles the full operational lifecycle behind the scenes: deployment, hardening, backups, updates, monitoring and incident response.

The customer keeps full ownership of their infrastructure, data and cloud relationship, and simply adds Elestio as the managed operations layer on top. There is no migration to a third-party cloud and no lock-in.

Enterprise-grade, compliant, fully managed

Every service is deployed on dedicated, isolated instances and managed end to end, so teams get the freedom of open source with the reliability of a commercial managed service. Elestio is ISO 27001 certified and SOC 2 Type II compliant, giving regulated and security-conscious organisations the assurances they need. Each Elestio-managed service on T Cloud includes:

- 400+ open source services, from databases and message queues to analytics, AI and developer tooling
- Automated encrypted backups with off-site retention
- Automatic security patching and updates, applied and tested for you
- 24/7 monitoring, alerting and proactive incident response
- Dedicated, isolated instances with security hardening by default
- Built-in CI/CD pipelines, high availability and effortless scaling
- No vendor lock-in, predictable pricing and expert human support

Built for T Cloud self-managed open source users

The partnership creates immediate value for the many T Cloud customers who run self-managed open source today. Instead of spending engineering time on patching, backups, monitoring and security, these teams can hand operations to Elestio while keeping their data and workloads on T Cloud, preserving data residency, sovereignty and their existing relationship with Deutsche Telekom.

Coming next: Elestio as a native T Cloud Public Marketplace service

In the next phase, Elestio will become a fully integrated partner in the T Cloud Public Marketplace, available as a native service. Customers will be able to discover, provision and manage Elestio's managed open source services directly from the marketplace, from procurement through to deployment.

“Open source is the foundation of modern software, but running it reliably in production is still hard, and that is exactly the part most teams do not want to own. With T Cloud, customers get the freedom of open source and the assurance of a fully managed, compliant service, on the infrastructure they already trust.”

Steven Betito, COO at Elestio

“T Cloud Public combines what many customers are seeking: European data sovereignty, certified security and high performance in an open cloud environment. Elestio complements these strengths by combining the flexibility of open source with the reliability of a fully managed service, which customers will be able to easily access through the T Cloud Public Marketplace.”

Henrik Seiffert, Product Manager of the T Cloud Public Marketplace, T-Systems

About Elestio

Elestio is a managed open source platform that lets teams deploy and run more than 400 open source software packages on the cloud of their choice or on their own infrastructure. Elestio handles installation, security, backups, monitoring and updates, so companies get the freedom of open source without the operational burden. Available across a wide range of cloud providers and in 100+ regions, Elestio is SOC 2 Type II and ISO 27001 certified. Operated by ELESTIO LIMITED and based in Dublin, Ireland, the company helps organisations avoid vendor lock-in and keep full control of their data and infrastructure. Learn more at elest.io.

About T Cloud

T Cloud is Deutsche Telekom's cloud portfolio, bringing together public cloud, private cloud, and AI offerings under one brand. The portfolio is designed to support organizations in their digital transformation and includes cloud services that address requirements for data protection, compliance, and operational resilience. T Cloud empowers businesses and public sector organizations to innovate faster while maintaining control over their data, applications, and digital future.
